

CAPABILITIES STATEMENT

SLE Environmental are a Victorian owned and operated company that provides cutting edge, practical solutions to contaminated land management Australia-wide.

SLE Environmental are a trusted, proven site remediation specialist. We appreciate the complex and unknown nature of site remediation following breaking ground and the need to proactively manage and inform during the project for a successful outcome.

Our specialist project team maintain technical and practical experience, combined with in-house plant, provide our clients with the certainty that we can deliver complex projects on time and on budget.

Our team provides innovative sustainable solutions to maximise sustainability, efficiency, program, and cost savings for our clients. Our ongoing success is due to our lasting relationships with our clients and our outstanding communication and project delivery record.

Our simple and concise proposals, costings, second to none client communication and support allows effective and transparent project delivery.

WHO WE ARE

We strive for continual improvement and align our goals with the most sustainable practices to be one of the leading contractors in our respective industries.

Straightline (SLE) Group was formed in 2004 and are a Victorian owned and operated company which provides specialist contaminated land remediation services Australia wide.

SLE Group directors and managers have a combined experience of over 80 years in environmental remediation.

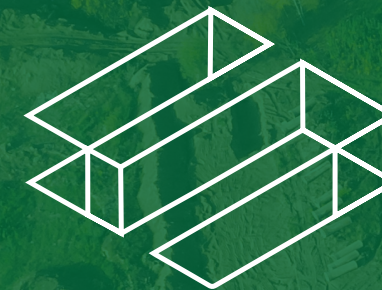

SLE Environmental's project team includes project directors, project managers, environmental and civil engineers, specialising in demolition and underground infrastructure removal, design and construct ground engineering and installation and specialist contaminated land remediation delivery.

We strive for continual improvement and align our goals with the most sustainable practices

to be one of the leading contractors in our respective industries. We pride ourselves on understanding, communication, loyalty, and transparency in our relationships with employees, suppliers, and clients, delivering excellence in all aspects of project delivery.

The internal collaboration between our Groups and focus on sustainable solutions, aligned with the most current laws and guidelines provides our clients with both the most sustainable and financially viable outcomes for their clients.

SLE Group are an equal opportunity employer. As a progressive business, we are considerate of and implement all environmental, quality, safety, social, equality, local jobs first requirements of proposals and project delivery.

"SLE Environmental appreciate the complex and unknown nature of site remediation following breaking ground, and the need to proactively manage and inform during the project for a successful outcome."

CORE SERVICES

SLE Group are the low cost, fixed price, package, and program-based delivery specialists offering fixed priced packages for the majority of works we conduct.

We have 'been there done that' and our understanding of the delivery process requirements and client drivers sets us apart from the competition. This allows us to provide packaged options, and the ability to respond to technical proposals and other rate-based prices.

We work closely with client-side consultants, designers, project managers and other project

stakeholders and understand all project drivers and align ourselves with their requirements from inception to project handover.

SLE Group are fully ISO accredited for Quality ISO9001, Environment ISO14001 and Occupational Health and Safety ISO45001.

PROJECT ADVICE

Before physical site remediation works, we specialize in providing the client with the most commercially viable and sustainable direction for the remedial works. Our Group consists of diverse and experienced members of the construction industry as well as environmental technical specialists providing the best of both worlds with a second to none insight into practical delivery.

We provide concise and transparent communication, and all our project team are versed in the projects scope and clients' expectations from project inception. We specialize in remediation pilot trials and remedial options assessments to inform the project planning phase.

PROJECT PLANNING AND REMEDIAL DESIGN

We appreciate the complex and unknown nature of site remediation following breaking ground and the need to proactively manage and inform the stakeholders during the project for a successful outcome. We understand the importance of starting the project of the correctly and through excellent communication and detailed programming to deliver the project on time and on budget.

approaches to site remediation and will provide various remedial option assessments where applicable. We also can provide lump sum pricing for most remedial projects and have had a multitude of successes with this approach. Lump sum pricing lessens the commercial risks and provides surety to the client for the sites' end use for divestment, development etc.

Through our ISO accreditation and internal protocols, safety is our number 1 priority as well as quality and environmental deliverables and other key performance indicators depending on scope. We appreciate that there may be varied and differing

Our project advice sures up the scope of works allowing us to provide lump sum pricing with confidence. We work closely with client to provide detailed and concise programming for the works.

CORE SERVICES

REMEDIATION CONTRACTING AND DELIVERY

Our environmental team have completed multiple remedial projects across Australia in various working hierarchies often under the direction of a consultant, project manager or an environmental

auditor. Our contract arrangements are often the Principal Contractor or Sub Contractor depending on the clients' requirements.

Established in 2004 SLE Environmental specialises in:

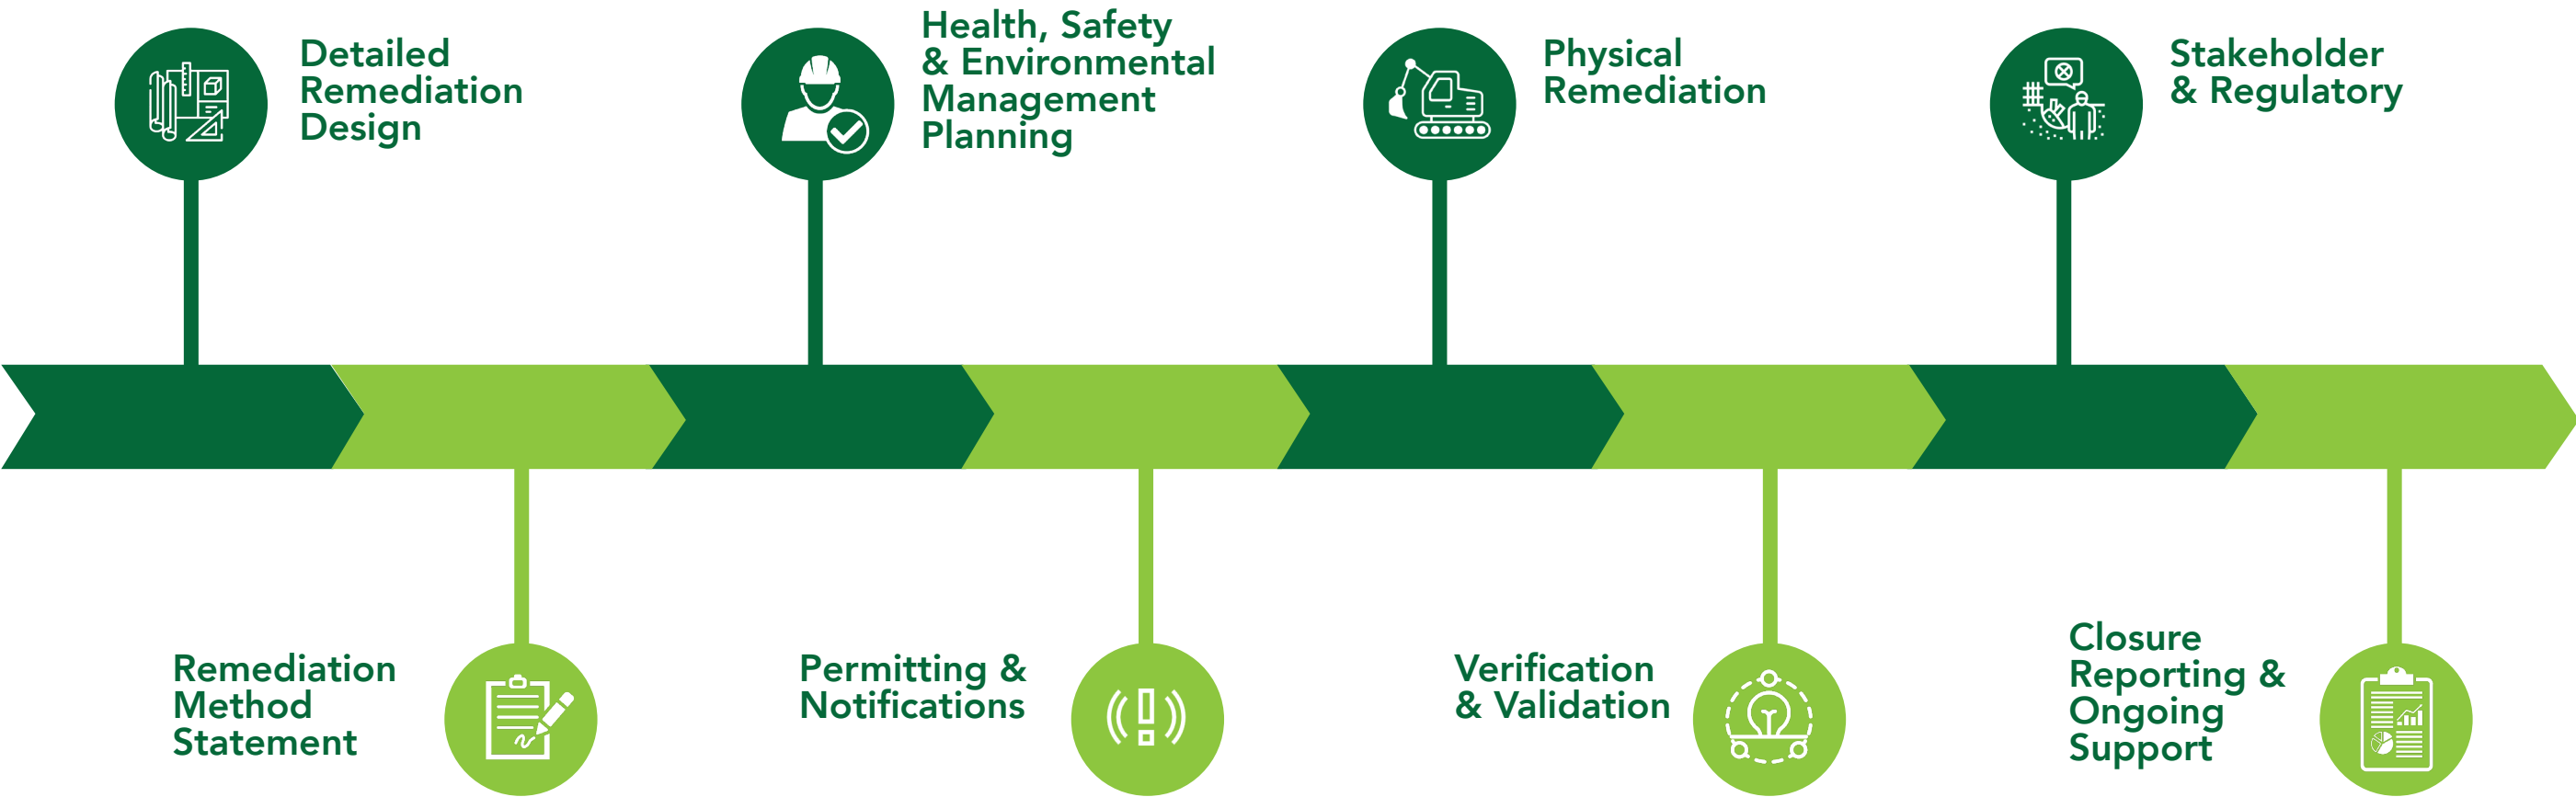

- Contaminated land pre works package specialists encompassing soil and groundwater contamination management, ground retention/engineering, environmental remedial delivery to project handover
- Lump sum site remediation providing surety to clients for divestment, development to mitigate commercial and environmental risk.
- Complex underground infrastructure removal, including in-situ decommissioning and disposal of Underground Petroleum Storage Systems (UPSS) and other underground storage tanks (UST) including integrity testing.
- Complex site retention and ground engineering strategies and delivery to allow the removal of contaminated soil and groundwater at depth or adjacent to structures, sensitive areas, or difficult geology.
- Site demolition and clean up.
- Contaminated soil management, removal, and disposal.
- Hazardous material, removal and disposal of liquids and soils.
- Asbestos removal and management in structures and soil including mechanical screening for asbestos
- In-situ and ex-situ chemical and cement stabilisation including PFAS contaminated material
- Bioremediation
- Passive and mechanical soil venting in situ and ex situ
- Remedial pilot trials
- Landfill design and construction, capping, trenches, sumps, boreholes, vapour and leachate wells, cut off walls and other site-specific vapour mitigation measures.
- Sub slab vapour barrier installation and monitoring
- Site clean-up, screening and separation of material including mechanical screening
- Groundwater and wastewater treatment systems
- Site environmental management
- Test pitting and drilling
- Contaminated land assessment and soil classification via our company partners
- Earthworks
